# KLIK Boks Quick Start Guide

Default Settings Password: **admin**
Default Administration Password: **adminpwd**
Default Wi-Fi Mode IP Address: **192.168.59.254**

**NOTE:** Steps 1 - 4 are one-time setup. Step 5 is for Users.

## 1 — Connect KLIK Boks to Display

**1)** Use either VGA or HDMI to connect the KLIK Boks to your display or projector.

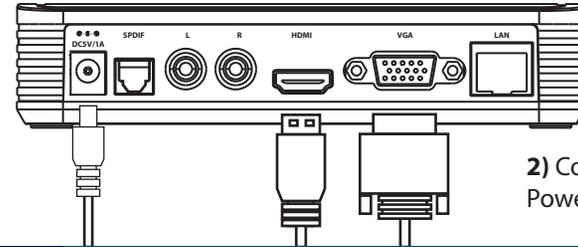

**NOTE:** Only one video output will be active at a time. Use either HDMI or VGA but not both.

**2)** Connect Power Supply and press Power button once to turn On.

## 2 — Add KLIK to a Wired Network

Use an Ethernet Cable to connect to your existing router
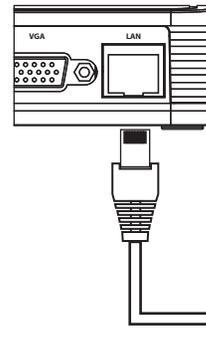

**NOTE:** To connect with Wi-Fi follow the instructions in the Section 4, "Add KLIK to a Wireless Network".

## 3 — Install KLIK Software

Download & Install from www.klikboks.com or the App Store for your device.

**NOTE:** KLIK may also be used without software installation. Windows, Mac, iOS and Android users can connect using their native streaming utilities.

### First, Connect to KLIK using Wi-Fi

**1)** Power on the KLIK Boks and confirm that the Standby screen is shown on the presentation display:
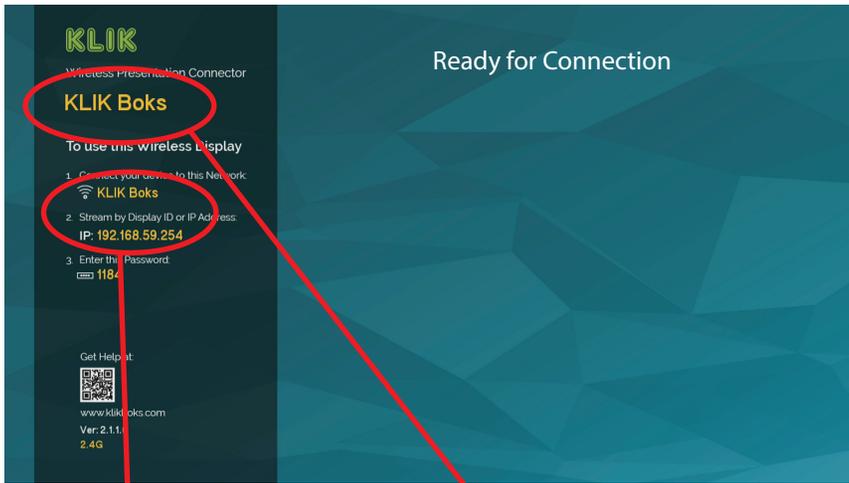

This is the Wi-Fi signal name being broadcast by KLIK. Connect to this SSID as shown below.

This is the Device ID, the default name of the KLIK Boks. It can be changed during Setup.

**2)** Open your computer's Wireless Network connection manager and select the KLIK Boks by name. Press Connect. No password is required.
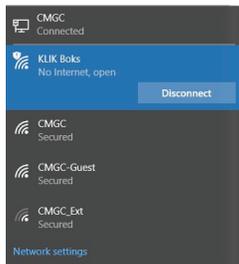

Windows          Mac

**NOTE:** Connect to KLIK as if you are connecting to a Wi-Fi network.

---

**3)** Open a browser window and navigate to the KLIK Boks IP address shown in the Standby screen (default is 192.168.59.254). Enter the password (Default is admin) and click Sign In.:
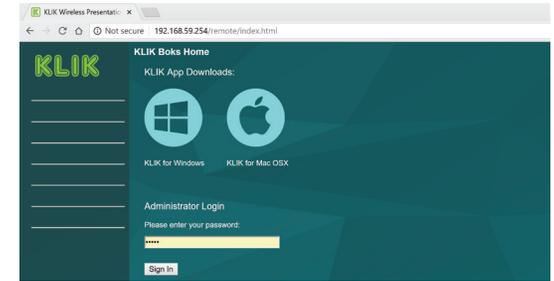

**4)** Select Wireless Settings from the menu on the left, then click on the Wi-Fi Connection tab to navigate to the Wi-Fi pairing screen.
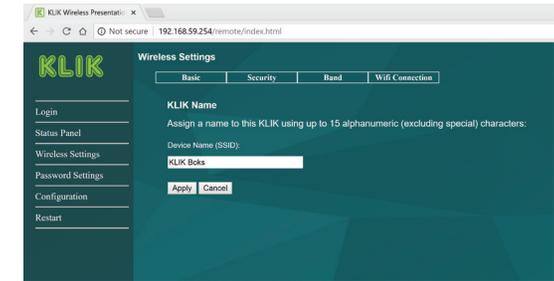

**NOTE:** If you change the Device Name at this stage, you must reconnect using the new name as in section 4b in order to continue setup.

**5)** Click on the "Scan for Wi-Fi" button to search for the wireless access point that KLIK will be connected with . This could take up to 2 minutes to complete. Select the preferred wireless Access Point (AP) from the list.

**6)** Enter the password for your selected Wi-Fi Access Point and click Submit. The KLIK Boks will terminate broadcasting its SSID and will connect to the Wi-Fi network. Any connected devices will be disconnected.
